STUDENT ATTENDANCE RECORD SYSTEM

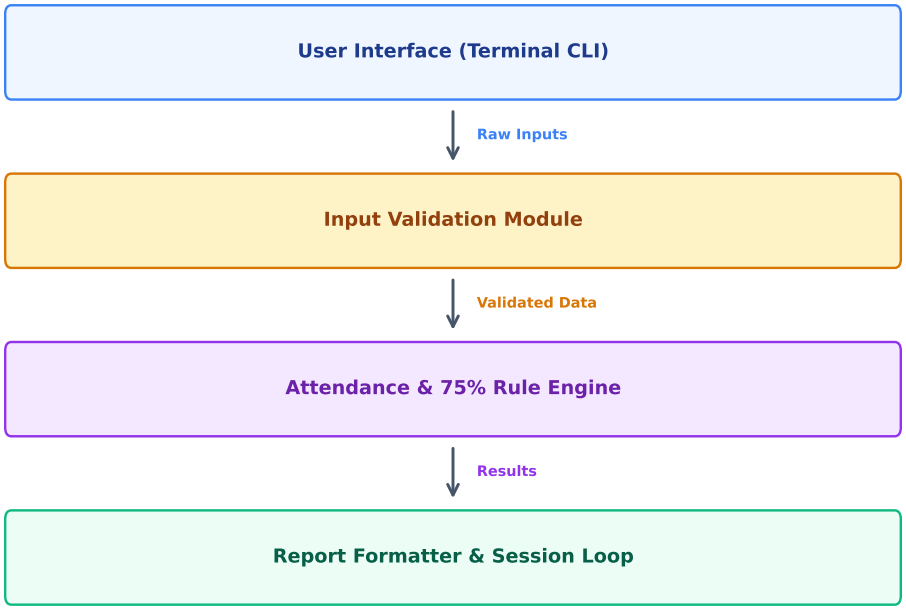

System Architecture & Use Case Diagram | Page 1 of 2

How the Program Works

- Takes student name, subject (CSE, EVS, English, or Maths), and class counts.
- Validates input to ensure valid subjects and non-negative numbers.
- Calculates attendance percentage: (Classes Attended / Total Classes) * 100.
- Checks the 75% rule to determine eligibility for CAT 1 and CAT 2 exams.
- Displays a formatted attendance report and allows checking another record.
